

ETC5523: Communicating with Data

Data storytelling on the web

Lecturer: *Emi Tanaka*

Department of Econometrics and Business Statistics

✉ emi.tanaka@monash.edu

📅 Week 4

🌐 cwd.numbat.space

Aim

- Understand a website structure and its difference to a webpage
- Learn how to use Quarto
- Adopt reproducible workflows using Quarto
- Host web content using either Quarto Pub, GitHub Pages or Netlify

Why

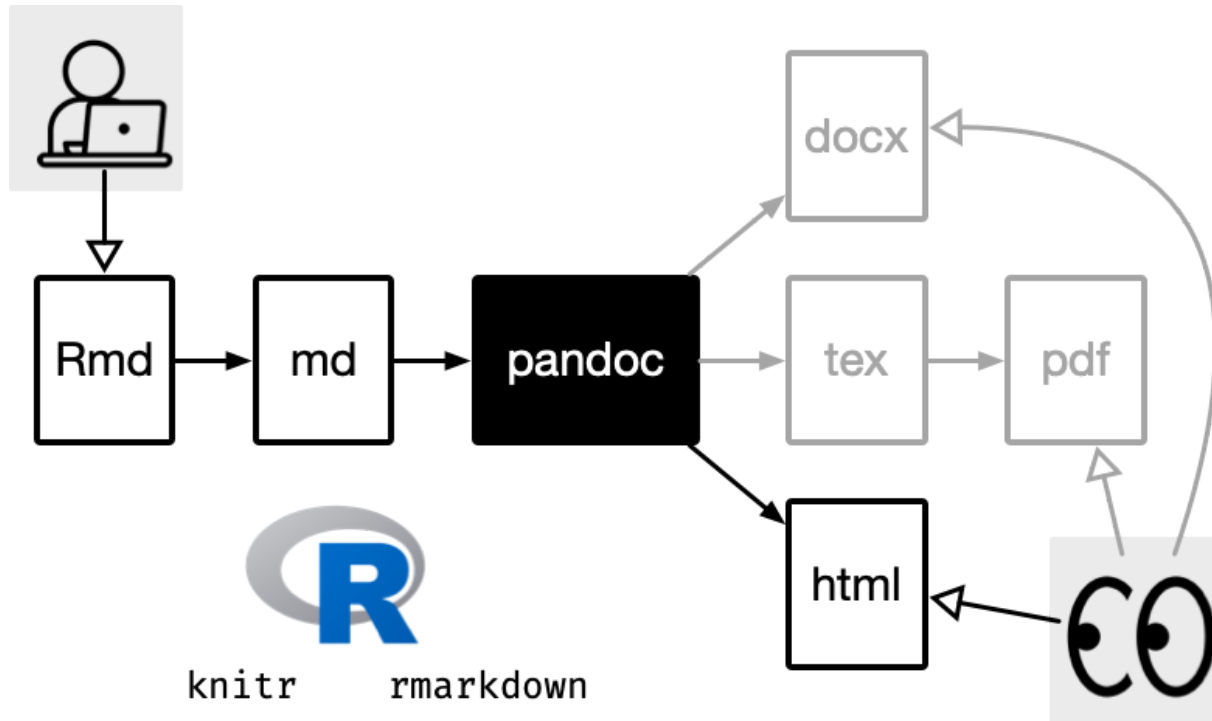

- Communication on the web is increasingly common
- There are challenges to streamline reproducible data analysis on the web

R Markdown

(Assumed knowledge from ETC5513)

R Markdown system

Benefits

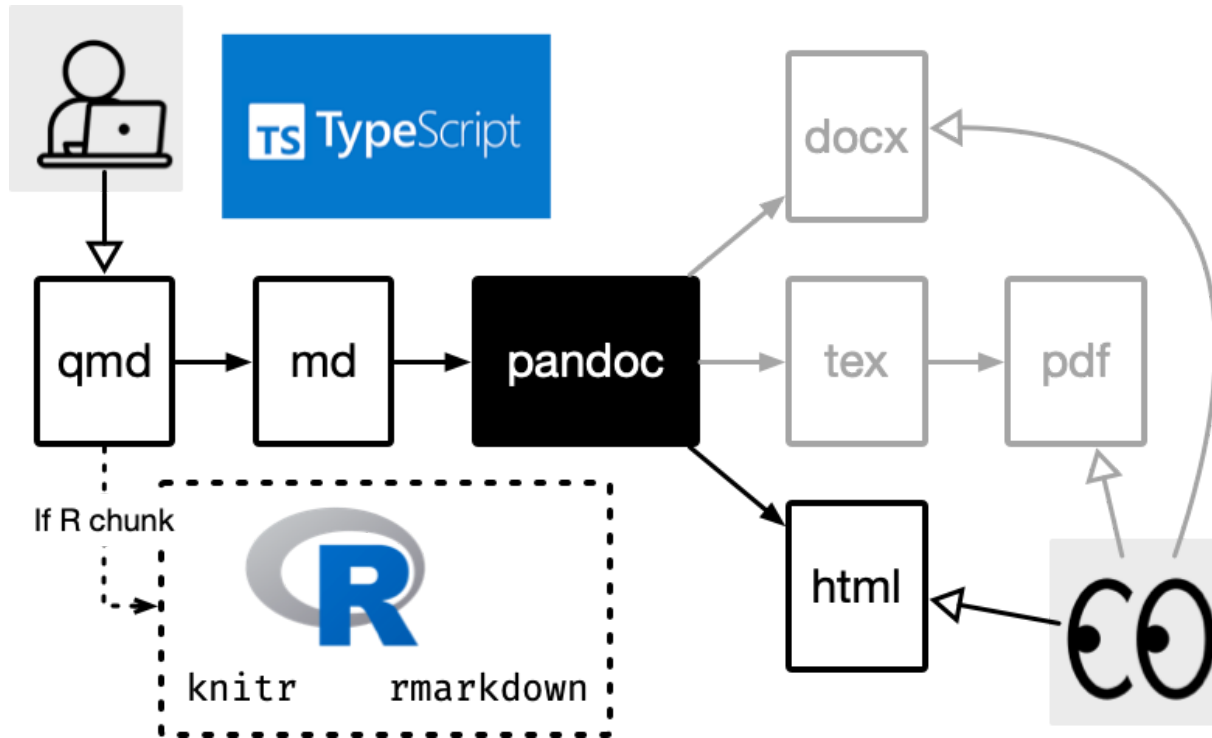

- Better reproducibility for analytical results via R
- Change output document type easily (thanks to Pandoc)
- Active maintenance and development by RStudio a.k.a. Posit team

(multi-language, next generation version of R Markdown)

Note: this is developed by RStudio (or [Posit](#) from October 2022) team.

Quarto system

Changes

- The reproducible workflow is no longer dependant on R
- Better multi-language support (e.g. Python, Julia, JavaScript, R, etc) and multi-engine support (e.g. Jupyter, Knitr, Observable)
- Consistency in systems across all formats (e.g. layouts, cross references)
- Some specifications for YAML and chunk options

Overall syntax comparison

Rmd

```

1  ---
2  title: "My document"
3  output:
4    html_document:
5      toc: true
6      css: styles.css
7  ---
8
9  ```{r, warning = FALSE, message = FALSE}
10 knitr::opts_chunk$set(echo = FALSE,
11                        fig.width = 8,
12                        fig.height = 6)
13 library(tidyverse)
14 ```

```

Qmd

```

1  ---
2  title: "My document"
3  execute:
4    echo: false
5  format:
6    html:
7      toc: true
8      css: styles.css
9      fig-width: 8
10     fig-height: 6
11     html-math-method: katex
12  ---
13
14  ```{r}
15 #| warning: false
16 #| message: false
17 library(tidyverse)
18 ```

```

Do we use Rmd or Qmd?

- If your computation uses only R, Rmd is completely fine.
- In this unit, we will be using Quarto for making:
 - websites (including blogs) and
 - presentation slides.

How to use Quarto

- Quarto is quite NEW – v1 was released only on 20th July 2022! 📄
- The best documentaton is at <https://quarto.org/>

[Overview](#)[Get Started](#)[Guide](#)[Reference](#)[Gallery](#)[Blog](#)[Help](#) ▼

Welcome to Quarto

Quarto® is an open-source scientific and technical publishing system built on [Pandoc](#)

- Create dynamic content with [Python](#), [R](#), [Julia](#), and [Observable](#).
- Author documents as plain text markdown or [Jupyter](#) notebooks.
- Publish high-quality articles, reports, presentations, websites, blogs,

Making Websites with Quarto

Webpage vs. Website

What is the difference?

Webpages

Website

- A **webpage** is a *single* document written in HTML.
- While a **website** is a collection of webpages where it usually share a common *navigation* bar (or tab), and possibly a common *footer*.

Web server directory index

- `index.html` is a special reserved name for the “index” page
- If you go to `https://cwd.numbat.space/`, this in fact is loading `https://cwd.numbat.space/index.html`
- Any other file name and folder structure requires you to append it to the domain or subdomain,
e.g. `https://cwd.numbat.space/lectures/lecture-00.html`

Getting started with Quarto blog

Using RStudio IDE

File > New Project > New Directory > Quarto Blog

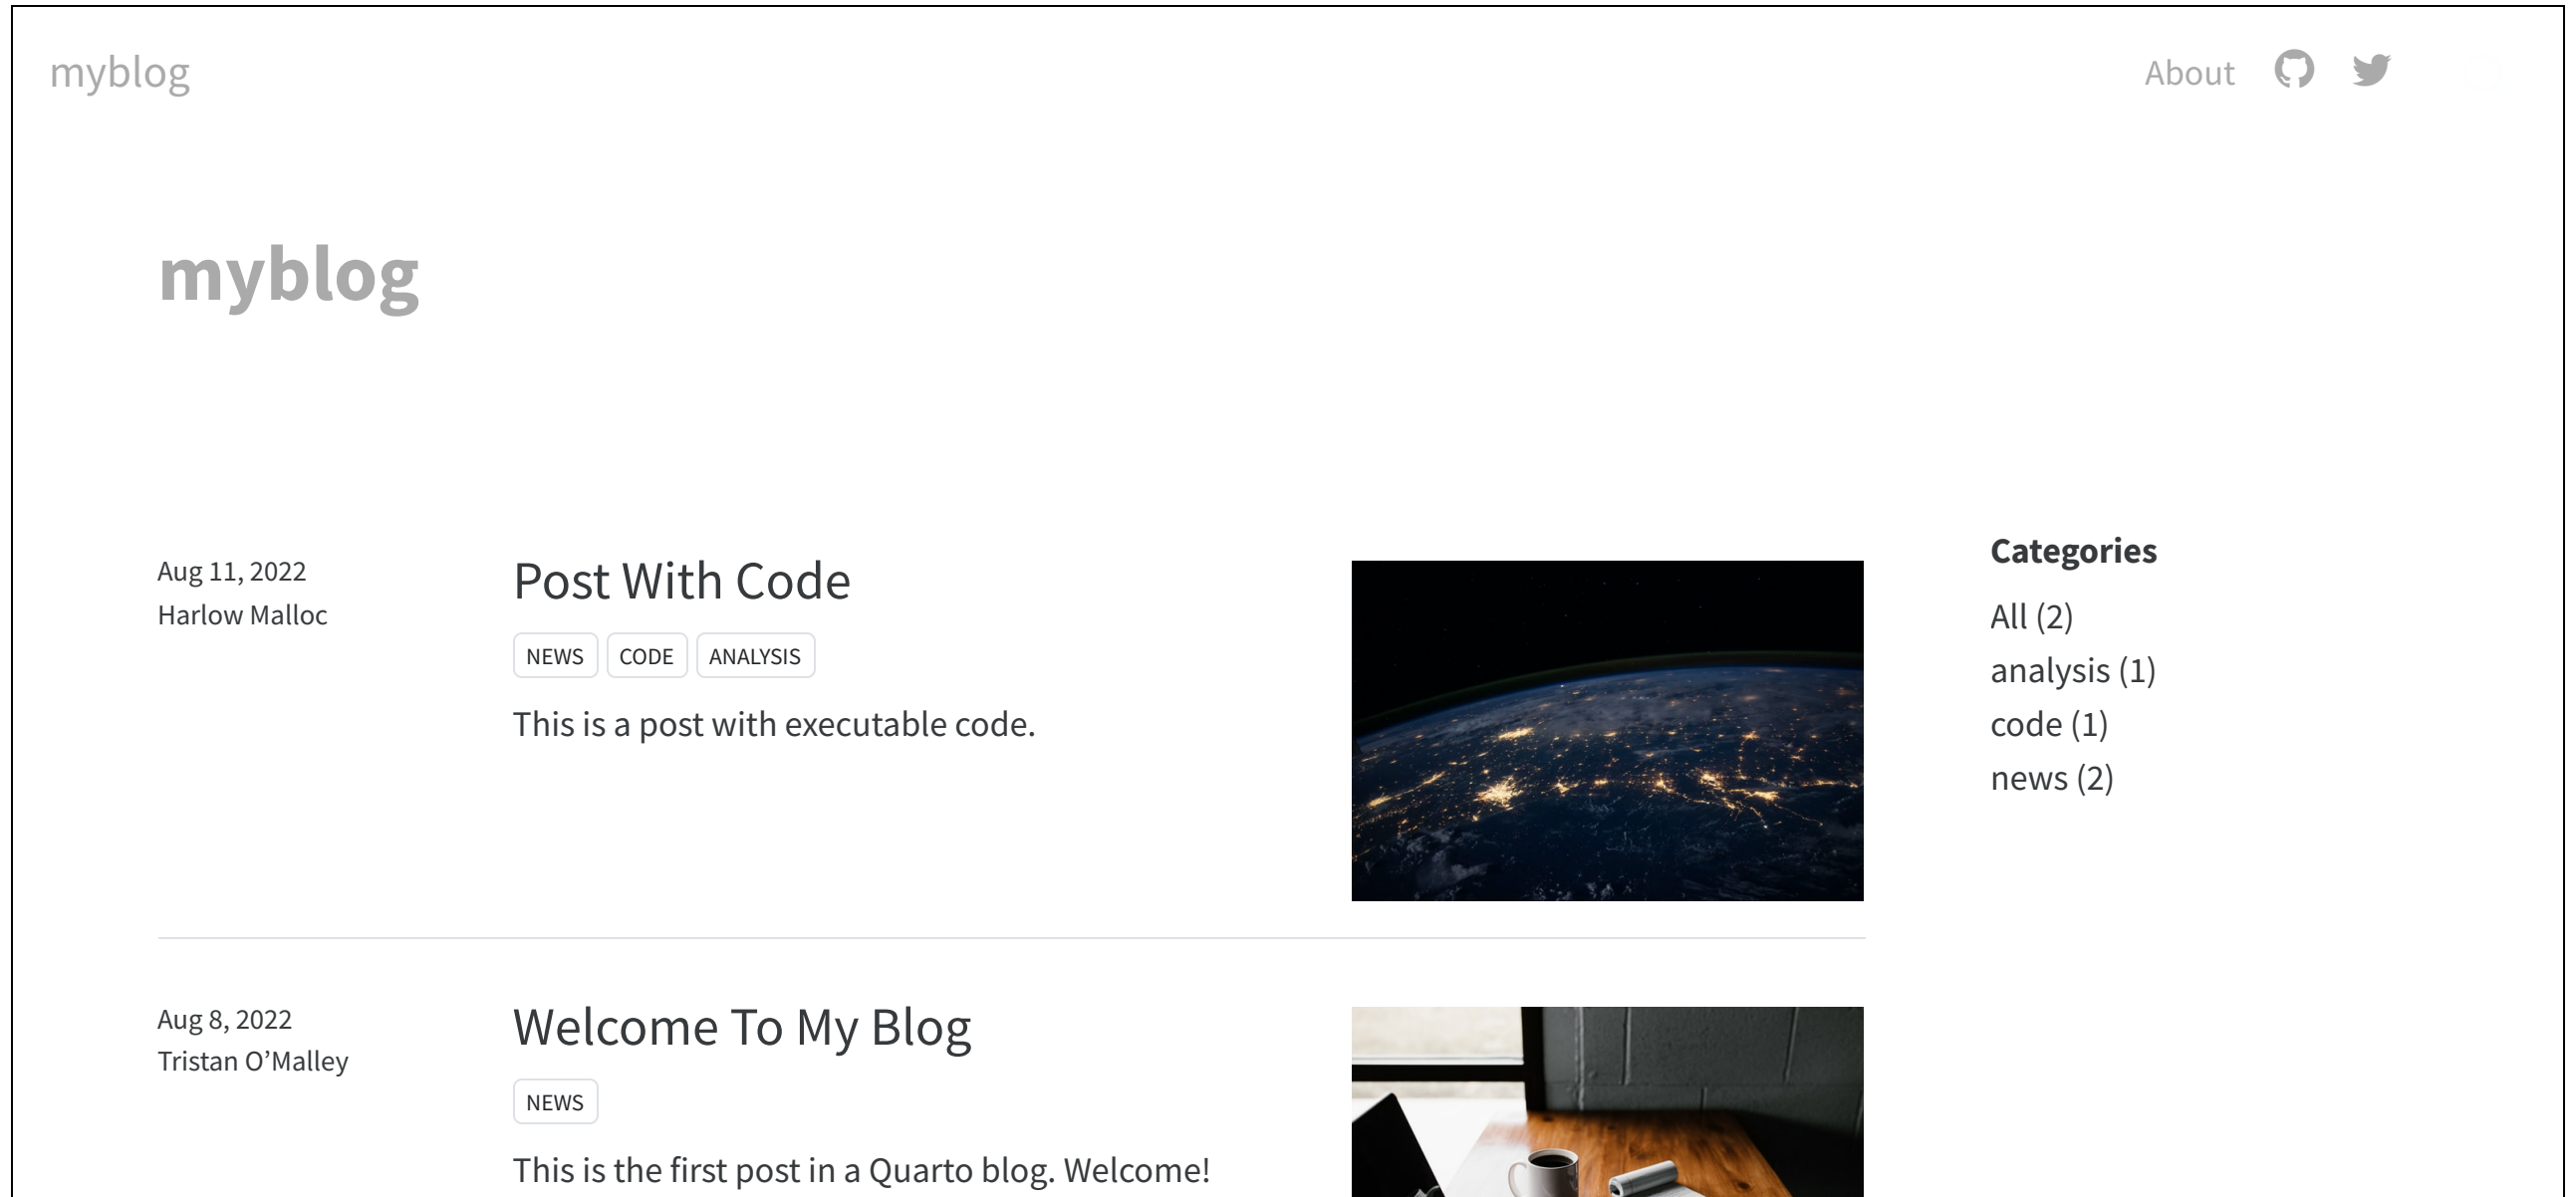

Command line

Run in the terminal:

```
1 quarto create-project myblog --type website:blog
```

This creates a basic file structure in the `myblog` directory.

Quarto blog template

Quarto blog structure

```
1 |— _quarto.yml
2 |— index.qmd
3 |— about.qmd
4 |— profile.jpg
5 |— styles.css
6 |— posts
7     |— _metadata.yml
8     |— welcome
9         |— thumbnail.jpg
10        |— index.qmd
11    |— post-with-code
12        |— image.jpg
13        |— index.qmd
```

Quarto workflow

- For a live preview of the website (when developing):

```
1 quarto preview
```

- For rendering the website (default folder is `_site`):

```
1 quarto render
```

_quarto.yml

```
1 project:
2   type: website
3
4 website:
5   title: "myblog"
6   navbar:
7     right:
8       - about.qmd
9       - icon: github
10         href: https://github.com/
11       - icon: twitter
12         href: https://twitter.com
13 format:
14   html:
15     theme: cosmo
16     css: styles.css
```

index.qmd

```
1
2 ---
3 title: "myblog"
4 listing:
5   contents: posts
6   sort: "date desc"
7   type: default
8   categories: true
9   sort-ui: false
10  filter-ui: false
11 page-layout: full
12 title-block-banner: true
13 ---
```

Publishing websites

Web hosting

Sharing on the web with Quarto Pub

- Go to <https://quartopub.com/> and log in
- In the terminal, run

```
1 quarto publish quarto-pub
```

- The website will be published at <https://username.quarto.pub/mysite/> where
 - [username](#) is your Quarto Pub username
 - [mysite](#) is the site name

Sharing on the web with GitHub Pages

```
1 usethis::use_git()  
2 usethis::use_github() # or manually link with your local folder
```

1. Push your directory to your Github repo, say **mysite**.
2. Go to your GitHub repo settings and enable “GitHub Pages”.
3. Your website will be available with url:
`http://username.github.io/mysite`

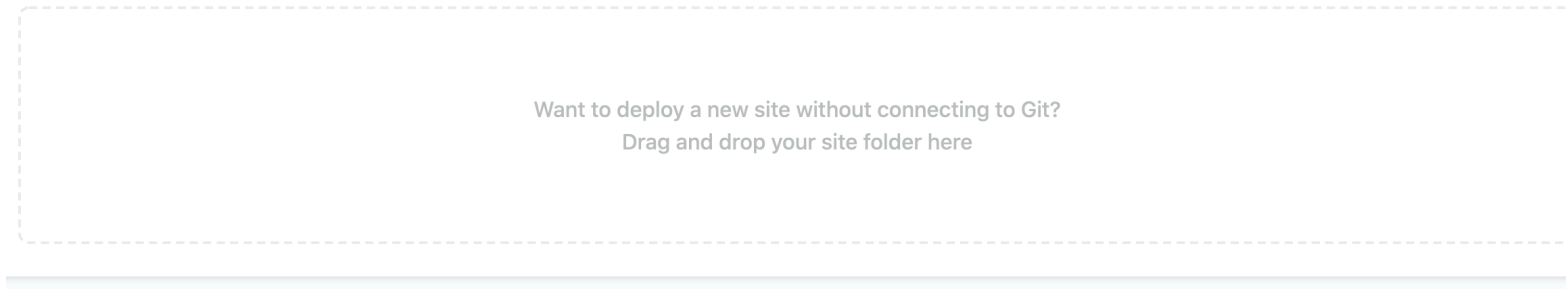

Note: it may take 10 minutes or so to render the first time.

Alternatively use

```
1 quarto publish gh-pages
```

◆ Sharing on the web with Netlify

1. Go to <https://app.netlify.com> and log in
2. Drag and drop your site folder which contains the `index.html` to:

3. Do go to `Site settings > Change site name` for a more sensible domain name.

Alternatively use

```
1 quarto publish netlify
```

Week 4 Lesson

Summary

- We looked at a website structure
- We built a website using the Quarto system
- We learnt how to host websites using Quarto Pub, GitHub Pages or Netlify
